This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

DESCRIPTION OF MONUMENT.

There is presented, on the opposite page, a photo-engraving of the south front of the State Soldiers' and Sailors' Monument. It is conceded by artists and others, who have traveled the world over, to be one of the grandest works of art in the world. With the exceptions of the crowning figure, the date astragal, army and navy astragals, the entire monument and ornamentatations were carved from the finest oölitic limestone in the world.

The quarries are, practically, inexhaustible, and are located within two hours' ride of the city of Indianapolis.

The size of blocks of stone are only limited by the means of transportation. This entire shaft could have been removed in one piece had transportation companies been able to convey it to its foundation.

There are four colossal figures, facing north and south, carved from blocks of stone weighing forty tons each. In their finished condition they weigh ten tons. On the east side, the War Group, consisting of fifteen figures, and on the west side, the Peace Group of eleven figures, were sculptured from rock weighing four hundred and eighty tons (these are the two largest groups that have ever been sculptured out of stone in the history of the world), while the Home-coming Group of three figures on the west side are from blocks of ninety-four tons. The Wounded Drummer Boy Group of three figures, on the east side, are cut from ninety tons of rock.

This stone has many advantages over marble or granite for building or monumental purposes, yielding readily to the chisel, saw, planer or lathe of the workmen when first taken from the quarries, hardening with exposure to the elements.

"The fire resisting properties of this stone are also very great. Heated to 1,000° F. and plunged into cold water, the cubes were not affected. Heated to 1,200° F. and plunged into cold water, the cubes crumbled slightly along the lower edges. Heated to 1,500° F. and cooled in air, the cubes retained their forms intact, but were calcined in a marked degree. This shows that the stone will withstand the effects of fire to the point of calcination."

THE STATE OF INDIANA,
EXECUTIVE DEPARTMENT,
December 3, 1902.

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE,
INDIANAPOLIS, December 10, 1902.

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct.

W. H. HART,
Auditor of State.

DECEMBER 8, 1902.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

CHAS. E. WILSON,
Private Secretary.

Filed in the office of the Secretary of State of the State of Indiana, December 10, 1902.

UNION B. HUNT,
Secretary of State.

Received the within report and delivered to the printer this 10th day of December, 1902.

THOS. J. CARTER,
Clerk Printing Bureau.

SIXTH ANNUAL REPORT

OF

DEPARTMENT OF INSPECTION

Hon. Winfield T. Durbin, Governor of Indiana:

Sir—I have the honor to submit the sixth annual report of the Department of Inspection for the year ending October 31, 1902.

We find the conditions in the manufacturing and mercantile establishments, quarries, laundries, bakeries and printing offices continue to improve. In nearly every instance, wherever establishments are enlarged or remodeled, the welfare of the employed is given very great consideration.

The result is apparent in so many establishments that whereas a few years ago they would have been considered models, they now excite no remarks. Conditions in many places would be still better were it not for the fact that, on account of increase in business, rooms and accommodations intended for the benefit of employes have to be utilized for the increased output.

I recall one manufacturing establishment that has moved four times in as many years, each time into a better and more commodious building. Could architects be impressed with the importance of, or be compelled to provide for the proper ventilation of new buildings, other than by windows, colds and headaches would not be so frequent. The general health would be greatly improved. The law says "there shall be sufficient ventilation for such work rooms." To furnish each of one hundred employes with one thousand eight hundred feet of fresh air, each hour, could be better arranged for while the building is in course of construction than after its completion.

Digitized by Google

CHILD LABOR LAW.

The law governing the employment of children between the ages of fourteen and sixteen years is being observed more carefully than ever for various reasons: First, employers have a better knowledge of the law; second, parents are more careful in making affidavits as to age; third, truant officers are more efficient; four, the supply of this kind of help is better distributed than heretofore.

Quite a number of complaints have been made of children under age working in factories, but when investigated by us they were found to be based on false information. We feel justified in saying that the Child Labor Law, in Indiana, is very generally obeyed.

TENEMENT HOUSE EMPLOYMENT.

There have been one hundred and fifty-one permits granted to persons for the manufacturing of skirts, overalls, etc., in their homes. This law is intended to keep out the sweat-shops, as well as to prevent the spread of contagious diseases from clothing made in homes.

We found employed in these homes one hundred and sixty-eight people, and the premises in very good condition. In only one instance did the family, or occupants, have but one room. In this case there was but one occupant. Seven families had but two rooms each, thirty-four families occupied three rooms each, five families eight rooms each, thirty-three families five rooms each, fifteen families six rooms each, and ten families seven rooms each.

It is claimed by the inspectors of Pennsylvania, that the introduction of typhoid fever into the camps of our soldiers near Chattanooga, in 1898, could be traced to the city of Philadelphia where much of the clothing was manufactured in tenement houses where this disease existed at that time.

Of the one hundred and fifty homes in this city where goods are manufactured, they could all be in a good sanitary condition when visited by us and a few days later some member of the family could be stricken with one of the many contagious diseases and thus infect the goods on hand so that the person

Digitized by Google

who might purchase a pair of overalls or other clothing could innocently carry the germs of disease to his own family.

The householder should be forbidden by law to deliver any such material, finished or unfinished, to the parties furnishing the same, or to any other persons from any household where any proscribed contagious diseases exist, except on orders from the health officer and then only after a certificate had been issued by such officer permittiug the return of such goods or material.

DANGEROUS OCCUPATIONS.

There are no proscribed occupations in our State. If a boy or girl is fourteen years of age and can read and write they can be engaged at any kind of employment, except that boys under sixteen and girls under eighteen years of age shall not clean machinery while in motion.

In Belgium, after an exhaustive investigation, sixty-five trades were closed to children under sixteen and twenty of these to females under twenty-one. Germany, France, Italy, Sweden and Norway all have extended lists of forbidden trades.

With the rapid development of manufacturing industries in our State we will profit by their example if we shall prohibit the employment of boys under sixteen and women under twenty-one from those occupations that are so injurious to health. Females under sixteen should not be permitted to work in cigar, tobacco or match factories, or rubber works. Females over twenty-one employed in rubber works should be limited to not more than eight hours per day with one hour and a half of rest and exclusion from the workroom.

While dangerous machinery is as well protected in Indiana as in other States, I am convinced that we need a proscribed list similar to Ohio, which is: "That no young person under the age of sixteen years shall be employed by any person, firm or corporation in this State, at employment whereby its health is likely to be injured, or its morals may be depraved by such employment."

"No child under the age of sixteen years shall be employed at sewing belts, or to assist in sewing belts in any capacity whatever; nor shall any such child adjust any belt to any machin-

Digitized by Google

ery; they shall not oil or assist in oiling, wiping or cleaning machinery; they shall not operate or assist in operating circular or band saws, wood shapers, wood jointers, planers, sandpaper or wood polishing machinery, wood turning or boring machinery, stamping machines in sheet metal and tinware manufacturing, stamping machines in washer and nut factories, operating corrugating rolls, such as are used in roofing or washboard factories; nor shall they be employed in operating any steam boiler, steam machinery or other steam generating apparatus; they shall not operate or assist in operating dough brakes or cracker machinery of any description; wire or iron straightening machinery; nor shall they operate or assist in operating rolling mill machinery, punches or shears, washing, grinding or mixing mills, or calender rolls in rubber manufacturing; nor shall they operate or assist in operating laundrying machinery; nor shall children be employed in any capacity in preparing composition for matches, or dipping, dyeing or packing matches; they shall not be employed in any capacity in the manufacture of paints, colors or white lead; nor shall they be employed in any capacity whatever in operating or assisting to operate any passenger or freight elevator; nor shall they be employed in any capacity whatever in the manufacture of goods for immoral purposes, or any other employment that may be considered dangerous to their lives and limbs, or where their health may be injured or morals depraved; nor shall females under sixteen years of age be employed in any capacity where such employment compels them to remain standing constantly."

BAKESHOP AND FOOD PRODUCING ESTABLISHMENTS.

Bakeshops and food producing establishments have added greatly to our duties, much more so than anticipated. In our inspections of these places we have found a few of them that were in very good condition, while others were a menace to the health of their patrons. The Deputy Inspectors have been very rigid as the orders issued will show.

To look after these establishments, properly, will require the time of an inspector and he should be a practical baker. I therefore recommend that one be added to the force of deputies whose special work shall be with this class of establishments.

Digitized by Google

FIRE ESCAPES.

Sixty-nine fire escapes have been ordered on buildings now covered by the law. We have had our attention called to certain buildings, by fire chiefs and others, asking that we order escapes on them. They were either lodging houses or hotels which were only three stories high and exempt under the present law which should be so amended as to include buildings of this class.

BOILER EXPLOSIONS.

As predicted in our last report, the fatalities are much greater this year. There have been ten explosions which caused eleven fatalities and twelve injuries. None of the establishments in which these explosions occurred had been inspected by our or any other inspectors. Four of them were saw mill boilers, five portable boilers, and one in a grain elevator.

A law that would compel owners of boilers to have them inspected by a competent inspector every six months and to provide one safety valve, one steam gauge, one water column, three gauge-cocks and a fusible plug on each boiler, all in good working order, would reduce this class of explosions and make life safer around these small saw mills where the man in charge is so often incompetent.

As long as there are only one or two killed at each explosion no notice will be taken of the necessity of licensing the engineers who have charge of these boilers. Not until after some great catastrophe occurs where a dozen or more persons lose their lives, will our lawmakers be induced to pass such a measure as is in force in so many States. A law requiring every man having charge of high pressure boilers to be licensed by the State would be keeping abreast of the times and would be of no expense to the taxpayers as the fee charged for such licenses would more than meet the expense of such a board.

STATE INSTITUTIONS.

The boilers of all the State Institutions have been inspected by Deputy Inspector Williamson, who is an expert in this line. His recommendations have been made to you in detail and requires no further comment.

Digitized by Google

I find, by referring to the recommendations made two years ago, that nothing has been done for the protection from fire in the Central Hospital for the Insane, except that contracts have been let for changing the stationary bars on corridor windows to hinges, to be opened from the outside. This change should extend to every outside window where inmates are locked in their rooms; this recommendation to apply to all buildings, county or State, where bars are a necessity.

The fire walls of the north building of the Central Hospital for the Insane should extend through and above the roof and all openings through these walls should be closed with fire doors. The south building should have an entire new system of heating, as the present hot air conduits are considered unsafe.

ORDERS ISSUED BY THE DEPARTMENT.

Orders issued by the department have been very generally obeyed and in the best of spirit by owners and proprietors. This is especially true of the bakeshop requirements. After the law has been explained to them many of them say it is just what they have been wanting.

In the use of safety devices, as required by law, the workmen offer the most objections to their use by removing or refusing to work with them on their machines, claiming they are impracticable and that they are in more danger of being hurt with them on than without them.

The fact that hundreds of these devices are being used is sufficient answer to the first objection and that scarcely any one is injured on machines with the safety devices properly adjusted refutes the other.

RECAPITULATION AND COMPARISON WITH LAST REPORT.

FEATURES OF REPORT CHANGED.

Under the head of power we have omitted the pressure and horse power of boiler, believing it unnecessary, as we have shown to legislators and others, by these figures in former reports, the necessity of some legislative action with reference to these boilers that are not properly taken care of.

We have also omitted the total columns of employes, both for current and last year, giving instead the totals by towns

Digitized by Google

for the same years. There have been two columns added, one for organized labor, the other for those who are in a combination or trust, both of them exciting considerable interest at present.

Of the one thousand postal cards sent out to the principal manufacturers of the State asking for an expression as to the value of the report to them, three hundred and thirty-four answers were received. Of these two hundred and forty-four were very emphatic in their replies in the affirmative, twenty-eight were in doubt as to its value, thirteen merely acknowledged its receipt with thanks and twenty-nine were of the opinion that it was of no value.

Very respectfully submitted,

DANIEL H. McABEE,
Chief Inspector.

EXHIBIT A.

Tabulated Statement of Inspections Made

BY THE

DEPARTMENT OF INSPECTION OF INDIANA.

1902.

The following is an explanation of figures in column marked, "Orders Issued and Complied With":

No. 1—Relates to guarding machinery and belting.

No. 2—Relates to affidavits, registers, and the posting of laws and names of those between the ages of fourteen and sixteen years.

No. 3—Relates to toilet, wash-rooms and resting seats.

No. 4—Relates to elevators, hoisting shafts and stairways.

No. 5—Relates to fire-escapes, exits, alarms and the posting of notices, in sleeping rooms, how to reach fire-escapes.

No. 6—Relates to air space, water and ventilation.

No. 7—Relates to bake-shop regulations.

No. 8—Unclassified.

Those figures in black faced type indicate the orders that have been reported as having been complied with.

NOTICE.—November and December are months of 1901.

EXHIBIT C.

Selections from the 1,894 Orders Issued

BY THE

DEPARTMENT OF INSPECTION.

Showing the lines along which the Department is working, as well as the many phases of knowledge necessary for the proper discharge of the duties. These orders are revised, corrected, and mailed by the Chief Inspector on blanks prepared for that purpose from the office, 91 State House, where all communications with reference to same should be addressed.

EXHIBIT C.

Selections from the 1,894 Orders Issued by the Department of Inspection.

Jan. 6. Provide hood for swing cut-off saw; repair gauge-cocks on tubular boiler or provide new ones; provide larger combination and water column on two flue boilers or place gauge-cocks direct into boiler, and post laws.

Jan. 6. Repair plastering on walls and ceiling, and repair floor.

Jan. 7. Remove wedge from over safety valve and see that same is kept in safe condition.

Jan. 28. Box in or guard line shaft and pulleys leading from boiler room; provide guard along fly-wheel and belt of engine; box in all inmeshing gears; cover or countersink all protruding set screws in collars and hubs of iron pulleys; provide hoods for swing cut-off saws; remove ropes from same and provide balance weights instead; cover floor openings, and post laws.

Feb. 20. Provide another door through partition near end where the girls work on third floor; provide a thirty-six inch stairway where elevator now stands and run same down to the second floor, facing the north; remove debris from outside stairway; secure affidavit for minors between the ages of fourteen and sixteen years and keep same on file in the office, and post laws.

Jan. 3. Provide guards for all rip saws and frizzers; replace rope and weight on swinging cut-off saw with counterbalance weight; provide larger combination column for boilers; repair gauge-cocks and keep them in good working order.

Jan. 3. Remove all old paper from walls and ceiling of bake shop; lime wash or paint the same; provide top outward-tipping window screens and cuspidors for bake shop.

Jan. 3. Repair all holes in plastering in walls; lime wash or paint walls and ceilings; provide top outward-tipping window screens and cuspidors for bake shop, and keep all trash feathers cleaned out of shop.

Jan. 21. Cover line shaft between pulleys in corn mill; cover or countersink all protruding set screws in collars throughout mill; place a guard rail along engine belt and drive pulley on passageway side of engine; provide more space between rip saw table and bolting saw; erect a shield on west side of bolting saw, as suggested to foreman, and provide guard for rip saw.

Feb. 11. Lime wash or paint all side walls and ceilings; keep floor in a clean condition; clean out all trash and dirt from bake shop and keep it in a good sanitary condition; provide top outward-tipping window screens and cuspidors for bake shop.

Digitized by Google

Feb. 4. Provide some safe means of exit from third floor to one-story roof in rear of building, in event of fire and smoke preventing exit by stairway inside; such means of exit to meet the approval of this Department.

Feb. 8. Discontinue at once the discharge of water or steam from boilers or engines, in any way, into water-closet vault for use of employes of your shops.

Feb. 20. Provide all sleeping rooms in your hotel above the second floor with chain and knotted rope securely anchored in the wall over window lintel, and placed for convenient use of room occupants in event of fire cutting off use of stairway. The ropes must not be less than one-half inch in diameter and of sufficient length to extend from window to ground.

Mar. 10. Provide seats in rear of counters for use of sales people, and permit them to use them when not engaged in the active duties for which they are employed.

Mar. 15. Keep hall lights burning at night, as required by law, and alarm gongs on each floor; keep approaches to fire escape unobstructed. Doors leading to fire escape must not be locked at any time.

Apr. 12. Post State sanitation law for food producing establishments and comply with its requirements.

Apr. 14. Provide all sleeping rooms in your hotel above the second floor with chain and knotted rope securely anchored in the wall over window lintel, and placed for convenient use of room occupants in event of fire cutting off use of stairway. The ropes must not be less than one-half inch in diameter and of sufficient length to extend from window to ground. Provide outlet from third and fourth floors at east end of hall to No. 19½ North Meridian street by cutting doorway through at window in end of hall, to connect with a like doorway to be provided at south end of Circle Park Hotel hallway where window now is. Otherwise, a fire escape leading out of toilet rooms at east end of hall to one-story roof below. Also provide, on Meridian street front, two balconies at third and fourth floor windows directly over entrance to block at No. 19½, and, if possible to so arrange, connect with escape on Hollenbeck Press building; otherwise, connect by iron stairs and extend to ground landing.

Jan. 4. Reduce speed of 22-inch emery wheel from 1,220 revolutions to 1,042; clean out men's water closet; box band saw under table, and provide running board along line shaft, with hand rail for same.

Jan. 6. Provide a door in the northeast corner of Odd Fellows' lodge room on the third floor at east end of building; provide an outside stairway leading from same door down to the southeast corner, with a balcony or landing about midway.

Mar. 7. Provide roof ventilation for water closet in the main shop; secure guards for rip saws, and post laws.

Digitized by Google

Mar. 31. Place shield around gears on cloth folder and guard around gears on garnett machine; cover or countersink all protruding set screws in collars on shafting, and secure affidavits for all minors between the ages of fourteen and sixteen years and keep them on file.

May 3. Post, in a conspicuous place in every sleeping room, a notice, descriptive of all means of escape in case of fire; provide an alarm or gongs, capable of being heard throughout the house, or an electric alarm bell in each sleeping room.

May 14. Have engineer notify, at least a minute before starting engine, by blowing whistle or other warning so all persons can get away when engaged in working around machinery or belting.

Mar. 3. Provide two additional seats in closet for use of females.

May 3. Provide separate closet for females with separate approach from those used by the men; cover or countersink exposed set screws.
